1- Online Primavera Course for Engineers & Construction Managers!

We have managed to develop a highly simplified Primavera P6 course which aims at cutting down on your learning time and to enable you to understand the software better. The course is short, comprehensive, with content that can be accessed anytime, anywhere by trainees who have previously registered for the course.

Oracle's Primavera P6 has often been found to be intimidating and confusing, even by trained and experienced project personnel, which highlights the important need for repeated training and referral to related informative content. This is why this course has been formulated!

This course aims at enhancing your understanding and application skills of the Primavera P6 software, allowing you to become better and improved at project management.

2- Advanced Planning With Primavera Course

This course helps to explain and cover advanced planning with the Primavera P6, which has been left out in the previous course. This course can be said to be a follow up of the previous course with advanced concepts.

The course aims and improving your understanding and application of the schedule crashing techniques. The content of this course is focused on helping you comprehensively understand and utilize Primavera P6 for project planning & scheduling in order bolster chances for efficient project management and execution.

This course provides content which covers most of the complex and baffling topics, of an advanced nature, of Oracles' Primavera P6 software. The course teaches 21 advanced topics such as resource leveling, crashing and fast tracking, analysis, and many other topics regarding the Primavera P6 software. There are video tutorials to help boost learning of the trainees, and post completion trainees will feel confident about their learning and utilization skills of the Primavera P6 in an advanced mode.

3- Quantitative Schedule Risk Analysis with Primavera Online Course

This course aims at:

Improving the trainees understanding of Risk & Sources of Risk in Projects

Improve the trainee's abilities to model risk events in projects.

Enable trainees to formulate risk registers.

Aid trainees in performing schedule risk analysis.

Help trainees learn about performing cost risk analysis in project management.

Help trainees to perform qualitative & quantitative risk analysis for different types of projects.

Enable trainees to create risk analysis reports. The course covers topics relating to the Primavera Risk Analysis Tool. The core competency of this course is to enable students to better understand the basis of risk management in the case of efficient project management.

The course covers analysis of risk management and what risks are associated with projects. The course further provides examples and practices to allow trainees to get a clearer idea of the risk tools' importance and utilization in project management. The course contains 11 topics which cover almost all aspects of Primavera Risk Analysis Tool and risk management.

The target audience for this course include:

Project managers

Risk engineers

Schedulers

Project planners

Other concerned parties willing to learn risk analysis and risk analysis tool.

4- Progress Measurement System- Downloadable Course

Having information about how to use the Primavera P6 will not suffice in the case of project management. You will also need to analyze the progress of your given projects! This course provides the trainees with not only information and content about Progress Management System, and what type of measurement tools to utilize in order to report the project progress, but also we provide students with

vital tools like excel

templates, dashboards, and other resources which trainees can begin incorporating in their work instantly, on a daily basis. Adding to the benefit is the fact that the content of this course is downloadable.

Accurately measuring the progress of a project is a crucial process which, if done wrong, can impact the profitability and feasibility of a project, along with its success ratio. The entire process of developing a progress measurement protocol and actually measuring progress is complex with a set of complex frameworks, like the type of measurement, the accuracy of the data, the frequency of the collection and the system of record. Adding to the issue is the fact that all of these frameworks are of equal importance and cannot be ignored.

Progress analysis is extremely important if management wishes to execute a project efficiently and wants to secure the chances of timely completion and success of the project. Without an effective progress analysis protocol and activity, the management may fail to identify issues with the project and activities which are either: adding to the overheads being incurred, or are adding to the time being taken in regards to the completion of the project.

This course will help you learn about the importance of progress reporting and analysis, how to develop the right set of analysis protocols, and how to execute these predetermined protocols for effective project completion.

5- PMP® Online exam preparation course

Self-study PMP® Online exam preparation course offers a smart learning platform with almost 200 online simulation exam questions, helping to ensure that you do not lack practice. Adding to your benefit is the fact that this course offers access to a personal instructor who will be responsible for dealing with your concerns and queries. The course content is accessible 24*7 and is instantly available one you purchase this course. The course is updated to the Fifth Edition of the PMBOK® Guide. Your certificate of completion will be emailed to you immediately after passing the exam 60% or more.

6- English Language in Business Writing- Downloadable Course

With increasing globalization, the need for communication across economies, industries, and companies is growing at a pace faster than ever. With English being the most recognized language on a global platform, the need for business writing and communication in the English Language has recently surfaced. In order for effective communications with associates, affiliates, suppliers, and other stakeholders across cultures and borders, English is nowadays considered as the most suitable language for communication.

In order to boost your level of competency and communication, this course has been developed. The course includes content like:

- Introduction
- Common Grammar Mistakes
- Writing a Business Email
- Writing a Business Letter
- Writing a Minutes of Meeting
- Tip & Tricks
- Sticky note game

This course will enable the trainee to write clear, effective, professional business documents, especially email, memos, letters, and reports, which can make internal and external communications easier and more effective. If project managers have English writing and communication skills, they can communicate with other parties more effectively, raising chances for repeated utilization of your and your organizations' services. This can help give your career a boost and prepare you for the international environment and for the world of multinational companies, all of which always give high preference to English language communication and writing skills.
